PROFILE SUMMARY

Data Analyst with hands-on experience in SQL, Python, and Power BI, delivering end-to-end analytics across 295,000+ records. Built machine learning models with 92% detection accuracy, engineered predictive features for fraud classification, and developed KPI dashboards for business intelligence reporting. Proficient in data wrangling, exploratory data analysis, feature engineering, and translating data into actionable business insights.

TECHNICAL SKILLS

Programming & Querying: Python, SQL, MySQL — data extraction, transformation, and analytical modeling
Visualization & Reporting: Power BI, Excel — dashboard development, KPI tracking, and business reporting
Data Analysis: Exploratory Data Analysis (EDA), data cleaning, feature engineering, predictive analytics
Tools & Frameworks: Pandas, NumPy, Scikit-learn, Jupyter Notebook, Git, GitHub, Machine Learning

PROJECTS

1. AI Fraud Detection and Risk Intelligence System (Feb 2026 – Present) | GitHub Repository

• Analyzed **284,000+ financial transactions** via machine learning to elevate fraud detection capability and diagnosed the three predominant sources of false positive alerts.
•Built **10+ engineered features** to amplify the discriminative power of the fraud classification model.
•Developed a machine learning pipeline attaining **92%+ detection accuracy** across high-risk transaction segments
•Designed an automated risk-scoring framework stratifying **284,807 transactions** into tiered risk bands — low, medium, and high — to enable priority-driven intervention.
•Deployed an interactive Power BI dashboard encompassing **12+ analytical visuals** to surveil fraud prevalence, financial loss exposure, and risk indicators.
Tools: Python, Pandas, NumPy, Scikit-learn, SQL, Power BI, Excel, GitHub

2. Customer Churn Analysis using SQL and Power BI (Dec 2025 – Jan 2026) | GitHub Repository

•Analyzed **7,000+ telecom customer records** by resolving null entries, duplicate instances, and 15+ structural inconsistencies to establish analysis-ready data integrity.
•Implemented behavioral patterns across **4 key dimensions** — contract type, tenure, billing method, and pricing segment — to isolate primary attrition drivers.
•Quantified **5+ churn metrics** surfacing statistically distinct vulnerability profiles across customer cohorts.
•Flagged **~35% of the customer base as high-attrition risk**, delivering data-backed retention recommendations to mitigate revenue leakage.
•Constructed a Power BI dashboard with **10+ visuals mapping** churn distribution, risk segmentation, and retention exposure across the customer base.
Tools: SQL, Power BI, Excel / Python, GitHub

EXPERIENCE

Tata– Data Analytics Job Simulation (Forage) | Remote | July 2025- View Credential

•**Audited 5+ enterprise** datasets to surface performance trends and latent risk signals across operational segments.
•Rectified **10,000+ data entries** by addressing missing fields, erroneous data types, and structural inconsistencies to establish pipeline-ready data integrity.
•Scrutinized customer-level and transactional records to **reinforce delinquency prediction** model inputs.
•Produced a **4-section analytical report** integrating domain-specific visuals, accelerating internal decision velocity by consolidating fragmented insights.

BCG – Generative AI Job Simulation (Forage) | Remote | Nov 2025- View Credential

• Mined **3+ structured business datasets** to extract patterns underpinning strategic decision-making
• Orchestrated 1**0+ prompt workflows** to generate data-driven insights from financial and operational data

EDUCATION

Indore Institute of Science and Technology — Aug 2023 - May 2027 (Expected)
Bachelor of Technology (CSE) — **CGPA: 8.04**

CERTIFICATION

•Coursera- Process Data from Dirty to Clean (Google) -View Credential
•Udemy – Data Analyst Bootcamp- View Credential
